B1N0 •

SEED ROUND · $2.5M

The Spanish-first prediction market for the Americas.

Todo es 1 o 0. ¿Aciertas o no?

01

THE PITCH

B1N0 is the Kalshi for Latin America — a Spanish-first, mobile-first prediction market where every story that matters becomes a live SÍ/NO market: fútbol, política, economía, clima. Users stake, the pool reprices on every entry, and the sharpest early callers win the largest share. The crowd is the counterparty. We are never the house.

Founded by the General Manager of Escoge 2, a licensed Guatemala lottery operator, with 15+ years of regional regulated-gaming operating experience behind the team. We know these markets, these regulators, and these payment rails better than any outsider can.

02

WHY NOW

Prediction markets crossed into the mainstream in the US in 2024 — Kalshi and Polymarket proved the category at scale. No comparable product exists for Latin America, and none are Spanish-first. Central America is the beachhead: our offshore structure plus regional USD settlement gives us day-one reach across all six markets without stacking national licenses. From there, expansion runs to South America and other underserved American markets.

60M+ people across Central America	**ZERO** serious incumbents, none Spanish-first	**OPEN** regulatory window, offshore-first

03

HOW WE MAKE MONEY

Parimutuel AMM — users stake, the pool reprices on every entry, winners split pro-rata. B1N0 takes ~8% blended revenue per event across three cuts:

TRANSACTION FEES	SPREAD CAPTURE	RESOLUTION SKIM
1–5%	**1–2%**	**5%**
Dynamic, scales with pool skew.	Baked into AMM pricing both sides.	From winner payouts only. Losers unaffected.

Modeled V1 event: $2M stakes · 20K positions · $162K net revenue (~8.1% take). At flagship scale ($20M stakes) → $1.6M net per event. See appendix.

04

TRACTION

Live platform	b1n0.vercel.app — 19+ screens, 40+ components, dark/light themes, fully responsive
Admin suite	5 panels: event manager, revenue, fee rates, users, treasury
Core systems	Parimutuel AMM, 3-tier KYC, wallet (deposit/withdraw), portfolio with live P/L
12,000	pre-launch waitlist
$1.1M	in sponsor LOIs (2 signed)
$1.5M	in institutional liquidity soft-commits
Media partners	Prensa Libre · Soy502 · ESPN Centro — sourcing, context cards, neutral resolution

05

LEGAL STRUCTURE

Incorporated offshore as a cross-border platform. In regulated markets we operate under licensed local operators via rev-share and indemnity. USD settlement across the region via a single regional payment partner — one currency, one reconciliation, zero FX friction. Regional counsel: García & Bodán (Chambers-ranked; offices in Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica).

06

THE ASK · $2.5M SEED

PHASE 1 · Operational foundation. Third-party security and code audit of the existing platform. Formalize commercial agreements with regional payment processors and KYC providers. Hire a 5-person operations team across event sourcing, market creation, lifecycle management, and resolution. Seed the first V1 events.

PHASE 2 · Growth. Scale event cadence, activate the institutional liquidity desk, expand beyond Guatemala into El Salvador, Honduras, and Costa Rica.

40%	Team (5 operators + audit + eng)
25%	Platform & compliance infra
20%	GTM & sponsor acquisition
10%	Legal & regulatory counsel
5%	Initial event seeding

One event, end-to-end: setup, lifecycle, and B1N0 economics at resolution.

MARKET QUESTION

¿Superará la cosecha de café de Guatemala 2026/27 los 3.3 millones de sacos?

Resolves against Anacafé's official 2026/27 production estimate.

Guatemala is the world's 4th-largest Arabica producer. Coffee drives ~3% of GDP, employs 125,000+ families, and moves USD in every direction across the region. The official yield forecast is published by Anacafé and USDA FAS in May; until then the number is contested — drought, leaf rust, labor migration, and fertilizer costs all pull it different directions. There is no regional forward-looking instrument on this number. B1N0 is the first.

01

PRE-EVENT SETUP

Opening price	SÍ 0.52 / NO 0.48 — slight downside lean; MY2024/25 closed at 3.25M bags and declining
Event window	8 weeks — opens at post-harvest start, closes 48h before Anacafé's May release
Resolution	Anacafé official figure, cross-referenced with USDA FAS Coffee Annual
Partners	Prensa Libre and Soy502 supply weekly context cards; Anacafé data is public record

02

LIFECYCLE · 20,000 POSITIONS OVER 8 WEEKS

Price SÍ moves 0.52 → 0.61 as late-season weather reports come in favorable. Fee tier scales 1% → 5% with pool skew. 5% resolution skim applied at payout. Early callers lock cheap shares and capture the largest share of the loser pool.

Cohort	Users	Entry @	Stake	Shares	Pool Share	Per Winner	Return
Early SÍ	4,000	~0.53	$400K	754,717	$650K	$162.42	+62%
Mid SÍ	6,000	~0.57	$600K	1,052,632	$905K	$150.83	+51%
Late SÍ	2,400	~0.60	$240K	400,000	$338K	$140.76	+41%
NO losers	7,600	0.39–0.48	$760K	—	$0	-$100.00	-100%
TOTALS	**20,000**		**$2.00M**	**2,207,349**	**$1.89M**		

Resolution: $1.89M distributable pool → 12,400 SÍ winners paid pro-rata by shares · 7,600 NO users lose stake.

03

B1N0 ECONOMICS · THIS EVENT

CUT 1 · FEES	CUT 2 · SPREAD	CUT 3 · SKIM	NET REVENUE
$58K	**$16K**	**$99.6K**	**$162K**
dynamic avg 2.9%	baked into pricing	5% of winner payouts	~8.1% take on $2M

At flagship scale (200K positions · $20M stakes) the same take rate produces $1.62M net per event — target for Events 2 and 3 in 2026 as the waitlist converts and institutional liquidity comes online.

04

INSTITUTIONAL LIQUIDITY DESK · PHASE 2

B1N0 operates an internal brokerage modeled on CME's event-packet resale structure. Our regional sales team places event-level liquidity allocations with family offices, venture groups, and regional capital across Central America.

Participants provide pricing-collateral capital that seeds the AMM at market launch. Capital is untouched and principal-protected — it never enters the prize pool. Returns are paid from B1N0's transaction economics on that specific event, negotiated per deal with timing-weighted upside: earlier allocations into an event earn a larger share of realized fees.

This is not a passive LP product. It is a brokered institutional channel — the regional equivalent of how CME distributes event contracts. The desk builds a second revenue surface while giving regional capital a correlated-but-principal-safe exposure to a new asset class in their own currency and jurisdiction. Desk architecture, allocation tiers, and target partners available in the data room.
